Week 5 — Detailed Task Sheet

Embeddings & Vector Databases • RAG Fundamentals Manual Retrieval-
Augmented Generation Pipeline • Git — `git revert`

PART F — GIT: SAFELY UNDOING A COMMIT (git revert)

Practice Tasks

1. On a throwaway branch, make a small, clearly wrong change (e.g. an obviously broken chunk size like 0) and commit it.

Output:

```
nothing added to commit but untracked files present (use "git add" to track)
● PS D:\Internship-Tasks> git add chunk_test.py
● PS D:\Internship-Tasks> git commit -m "test: add intentionally broken chunk size"
[practice-git-revert 8c7421d] test: add intentionally broken chunk size
1 file changed, 1 insertion(+)
create mode 100644 chunk_test.py
○ PS D:\Internship-Tasks> █
```

2. Use git revert to undo that exact commit and confirm the file is back to the correct value.

Output:

```
create mode 100644 chunk_test.py
● PS D:\Internship-Tasks> git revert 8c7421d --no-edit
[practice-git-revert c212120] Revert "test: add intentionally broken chunk size"
Date: Sun Sep 20 14:59:22 2026 +0500
1 file changed, 1 deletion(-)
delete mode 100644 chunk_test.py
● PS D:\Internship-Tasks> Set-Content -Path "chunk_test.py" -Value "chunk_size = 500"
● PS D:\Internship-Tasks> Get-Content chunk_test.py
chunk_size = 500
○ PS D:\Internship-Tasks> █
```

3. Look at git log --oneline afterward and confirm both the original commit and the revert commit are visible — nothing was erased.

Output:

```
PS D:\Internship-Tasks> git log --oneline
