

AI SOFTWARE DEVELOPMENT INTERNSHIP

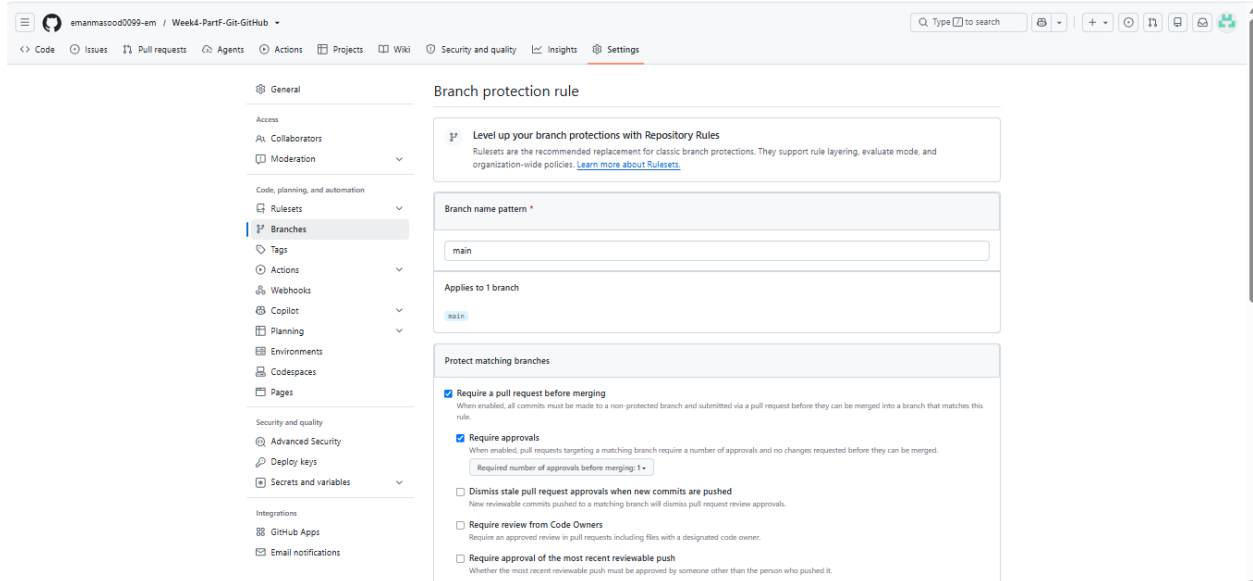

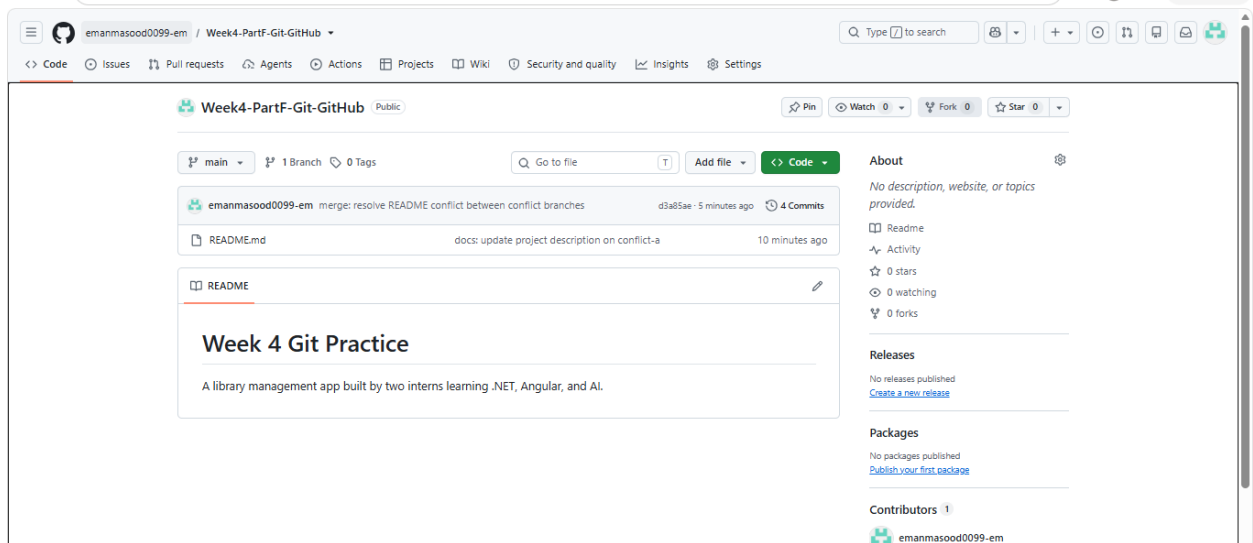

EMAN MASOOD (BSSE)

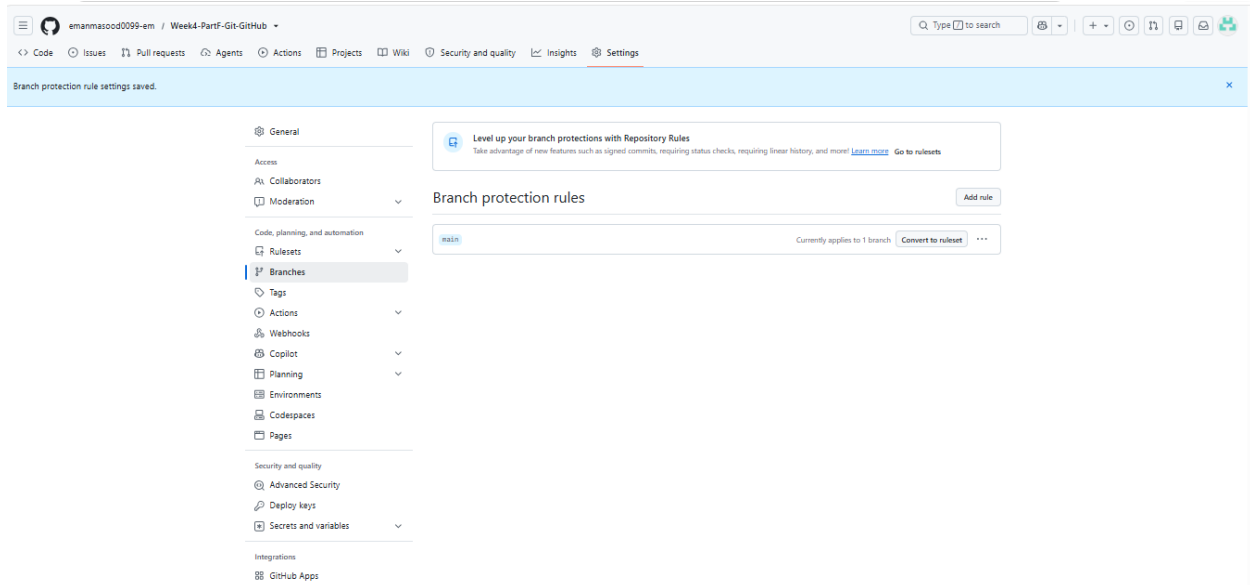

Week 4 — Detailed Task Sheet JWT Authentication (.NET + Angular) • FastAPI
Foundations LLM APIs In Depth • Prompt Engineering • Git — Level Up

PART F — GIT & GITHUB, LEVEL UP

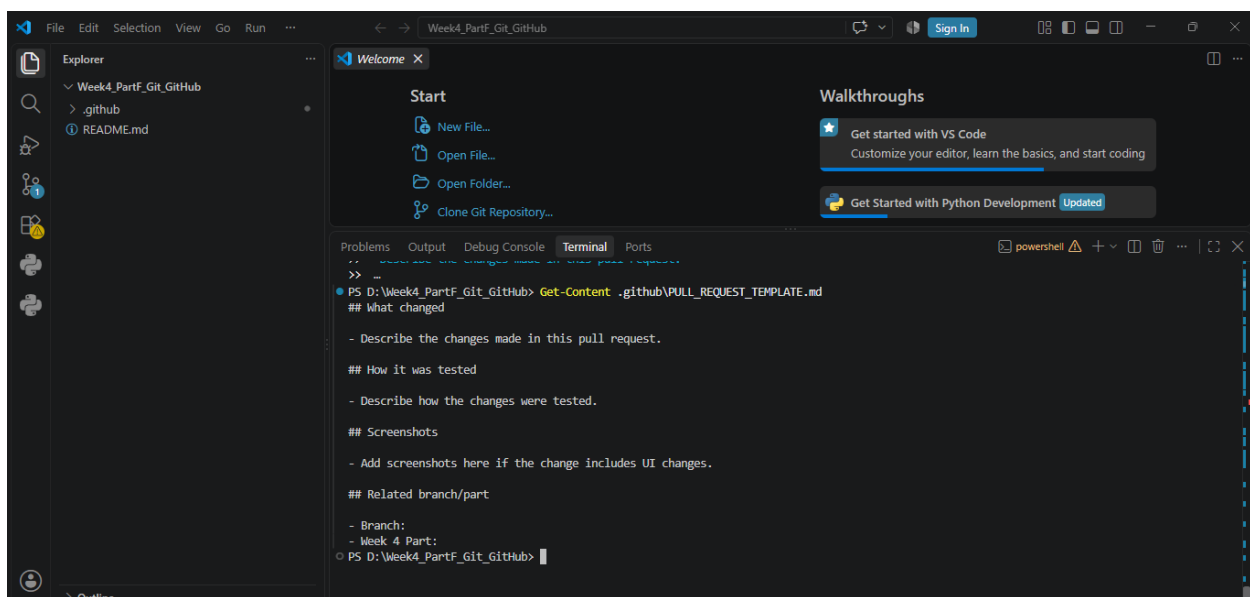

Outputs:

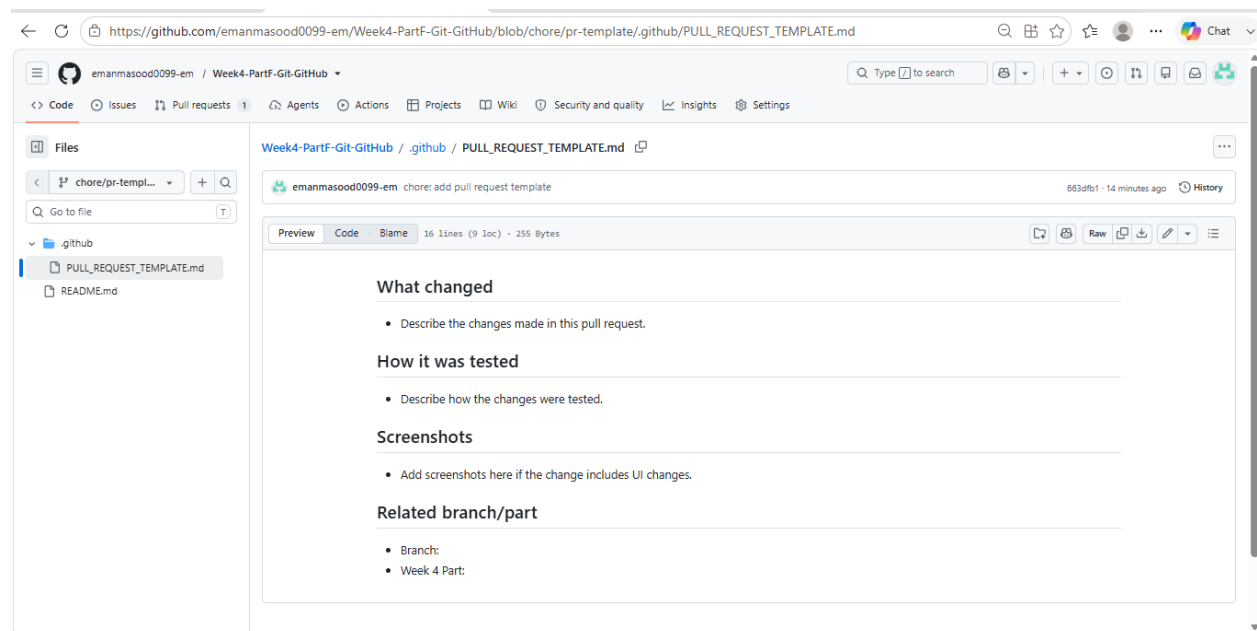

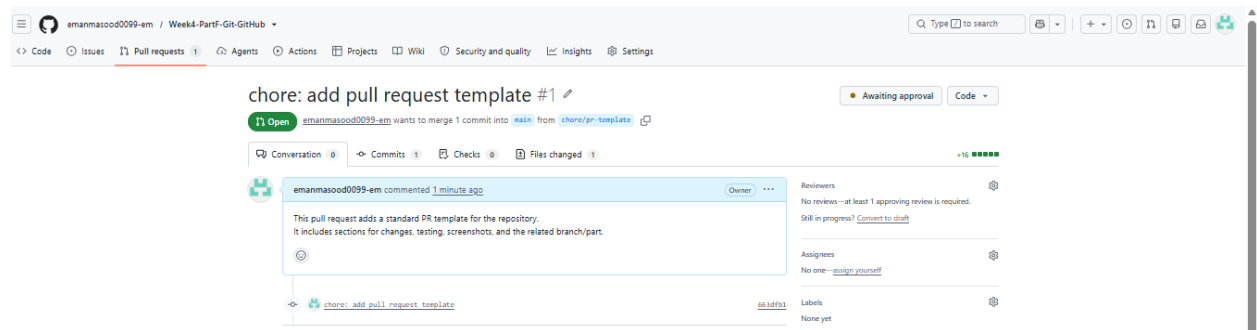

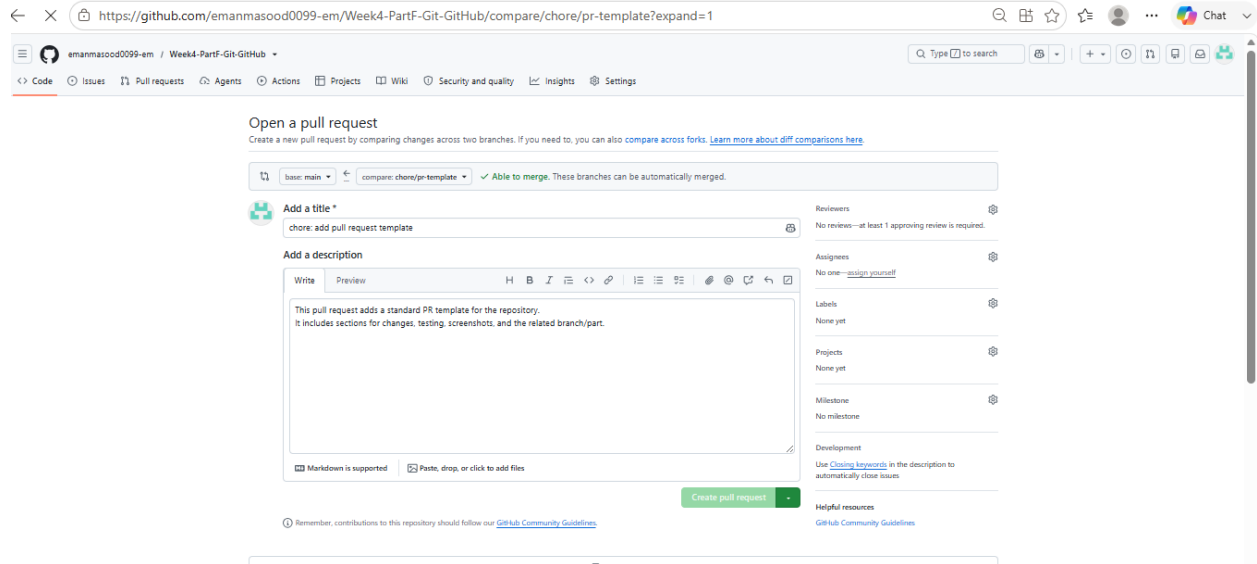

deliberately create and resolve a merge conflict (practice exercise)

protect main and add a PR template

Open a pull request

Create a new pull request by comparing changes across two branches. If you need to, you can also [compare across forks](#). [Learn more about diff comparisons here](#).

base: main ← compare: test/pr-template-auto ✓ Able to merge. These branches can be automatically merged.

Add a title *

test: verify automatic PR template

Add a description

Write Preview

H B I

What changed

- Describe the changes made in this pull request.

How it was tested

- Describe how the changes were tested.

Screenshots

- Add screenshots here if the change includes UI changes.

Level up your branch protections with Repository Rules

Rulesets are the recommended replacement for classic branch protections. They support rule layering, evaluate mode, and organization-wide policies. [Learn more about Rulesets](#).

Branch name pattern *

main

Applies to 1 branch

main

Protect matching branches

☒ Require a pull request before merging

When enabled, all commits must be made to a non-protected branch and submitted via a pull request before they can be merged into a branch that matches this rule.

☒ Require approvals

When enabled, pull requests targeting a matching branch require a number of approvals and no changes requested before they can be merged.

Required number of approvals before merging: 1

☐ Dismiss stale pull request approvals when new commits are pushed

New reviewable commits pushed to a matching branch will dismiss pull request review approvals.

☐ Require review from Code Owners
